

Pro C Paste

A complementary feedstuff for young calves.

An easy to administer complementary nutritional feedstuff for young calves, containing egg proteins in a high energy carrier.

Composition:

Capric caprylic triglycerides, dextrose, dried egg powder, fructo-oligosaccharides.

Analytical Constituents:

Crude protein 5%, Crude oil & fat 55%,
Crude fibre 0.3%, Crude ash 6%.

Technical Interest:

Weak calves: After birth, calves can be depleted of energy and may take time to stand. When lying down the calf will lose body heat more easily and will not drink.

Good start: Directly after birth the calf has no established gut flora, so the calf is extremely vulnerable. Supporting the development of healthy gut flora helps give calves the best possible start.
